routing

network

- global distributed file system

for Unix-like OSes

- share content using NFS

namespaces. SFS introduced a technique for building *Self-Certified Filesystems*: addressing remote filesystems using the following scheme

$$/sfs/<Location>:<HostID>$$

where `Location` is the server network address, and:

$$\text{HostID} = \text{hash}(\text{public_key} \parallel \text{Location})$$

10.2 Git Internals - Git Objects

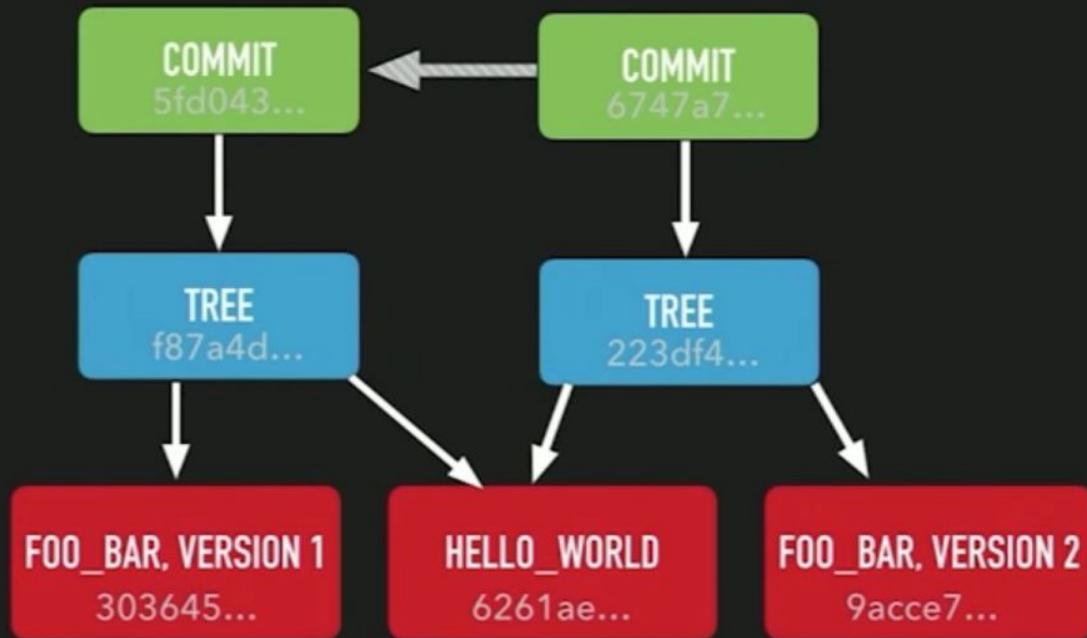

Git Objects

Git is a **content-addressable** filesystem. Great. What does that mean? It means that at the core of Git is a simple key-value data store. What this means is that you can insert any kind of content into a Git repository, for which Git will hand you back a unique key you can use later to retrieve that content.

```
$ echo 'test content' | git hash-object -w --stdin  
d670460b4b4aece5915caf5c68d12f560a9fe3e4
```

```
$ find .git/objects -type f  
.git/objects/d6/70460b4b4aece5915caf5c68d12f560a9fe3e4
```

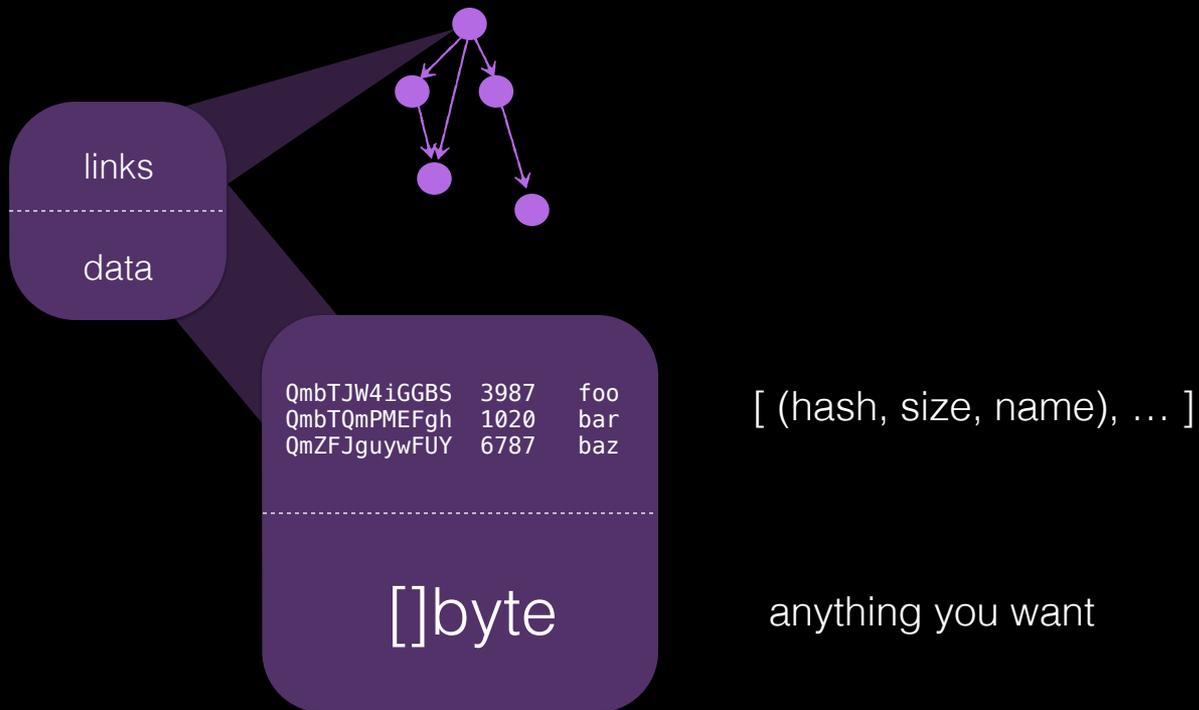

MERKLE DAG

Merkle DAGs help in

- De-duplication
- Data Integrity

in IPFS data forms a dag

nodes have
links and data

an IPFS node

an IPFS node

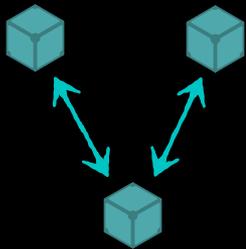

has pki based
identity

an IPFS node

has pki based
identity

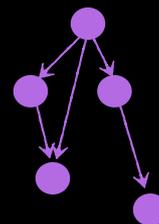

connects
to others

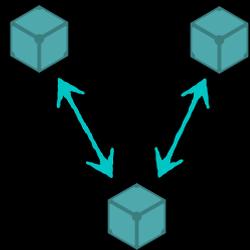

an IPFS node

has pki based
identity

can store part
of the dag

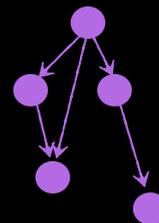

connects
to others

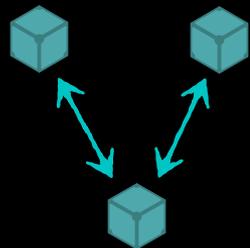

an IPFS node

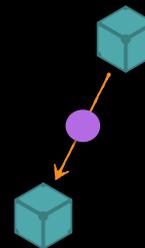

has pki based identity

can store part of the dag

connects to others

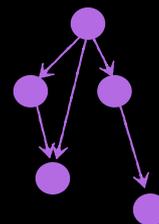

can get more from peers

an IPFS node

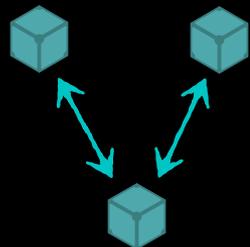

has pki based identity

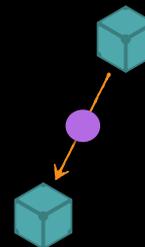

can store part of the dag

can be run as a server

connects to others

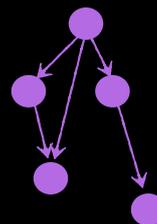

can get more from peers

an IPFS node

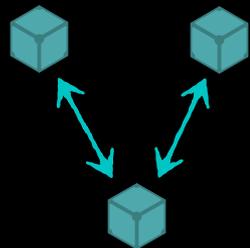

has pki based identity

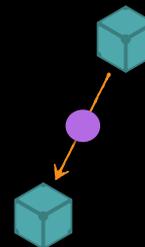

can store part of the dag

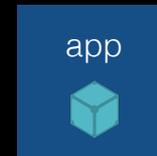

can be run as a server

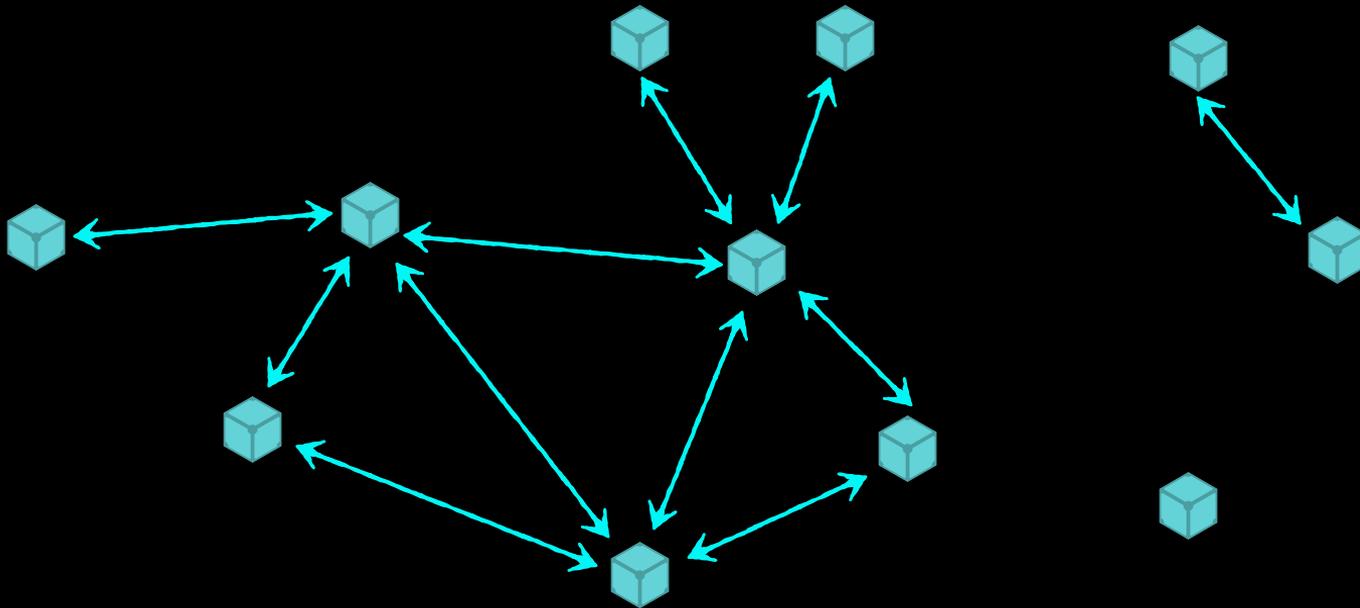

connects to others

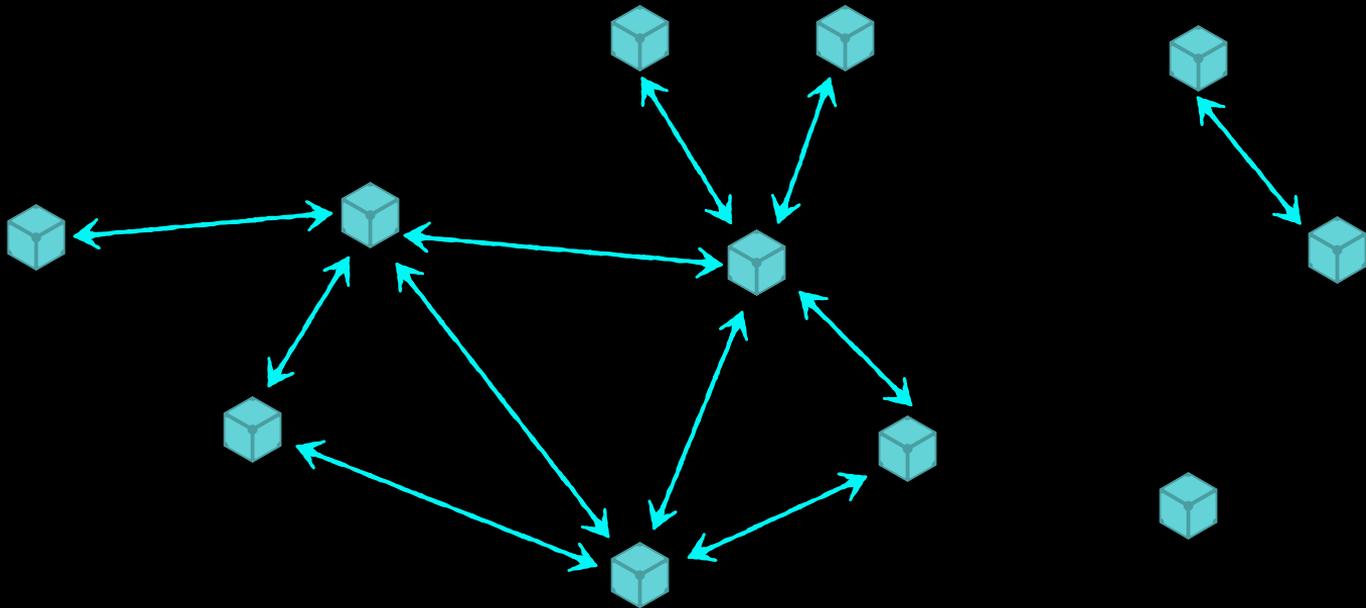

can get more from peers

or embedded in apps

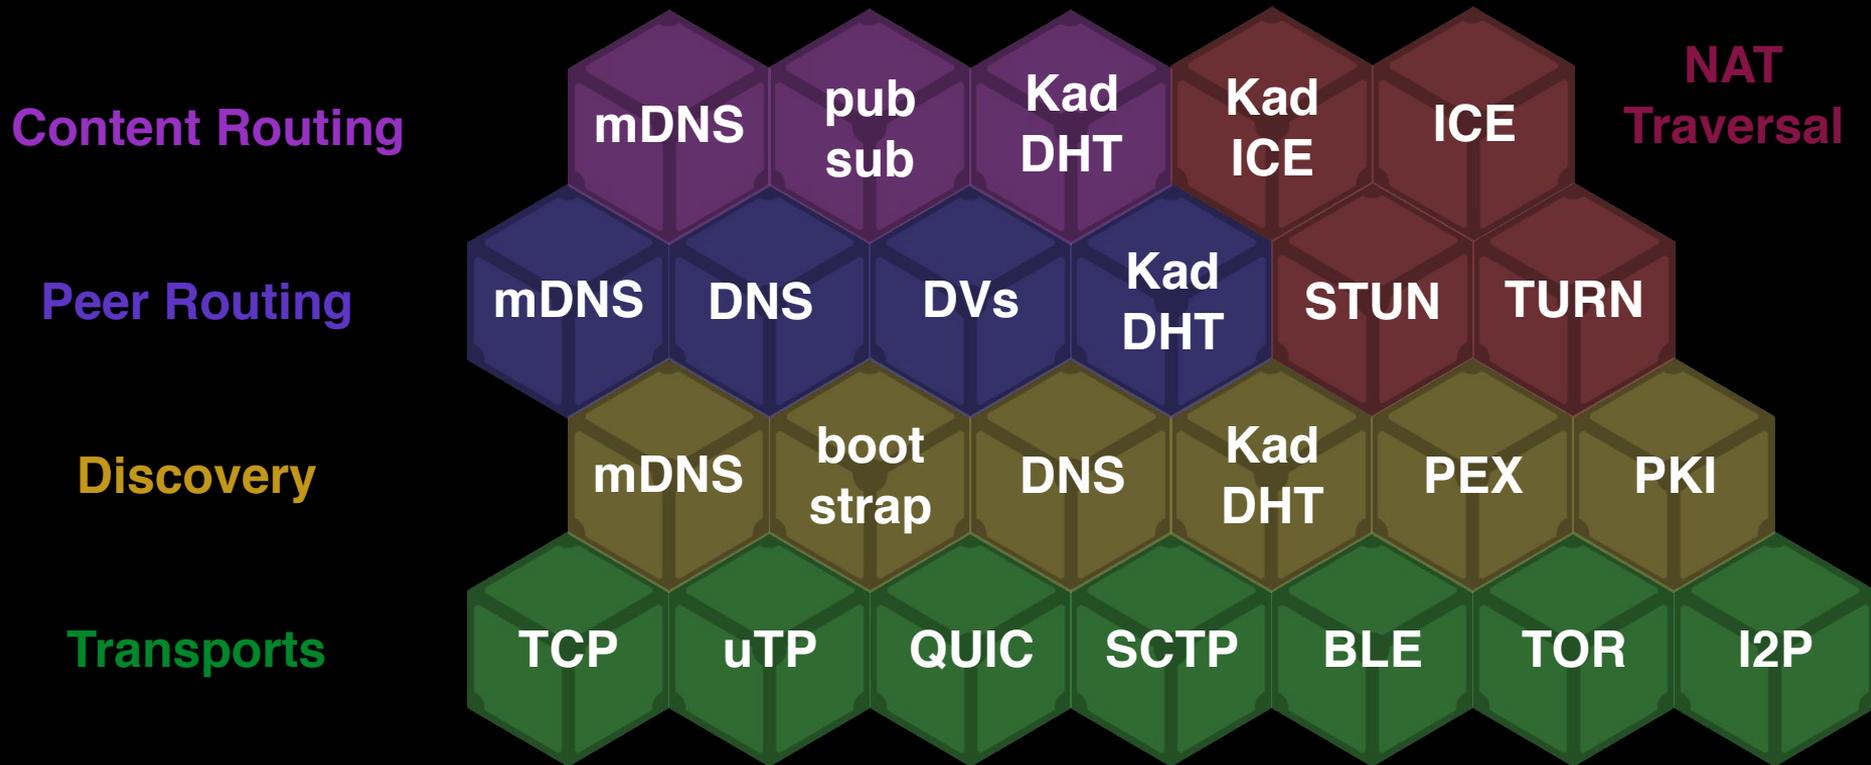

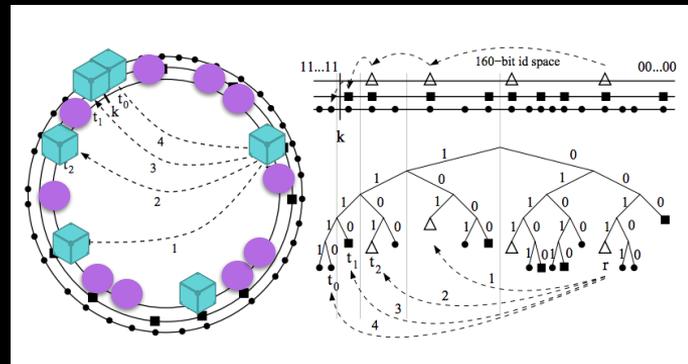

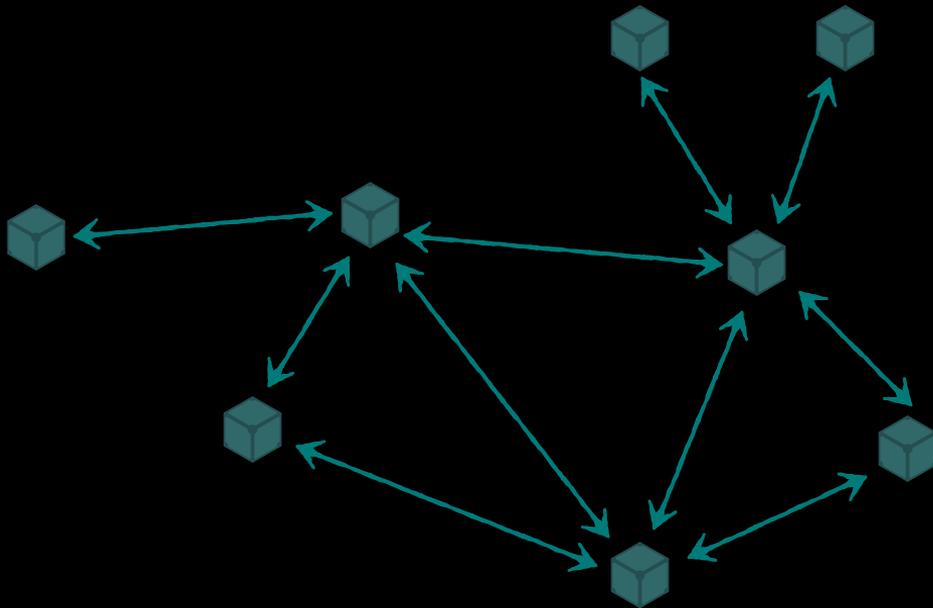

IPFS nodes form p2p networks
transport agnostic and with NAT traversal

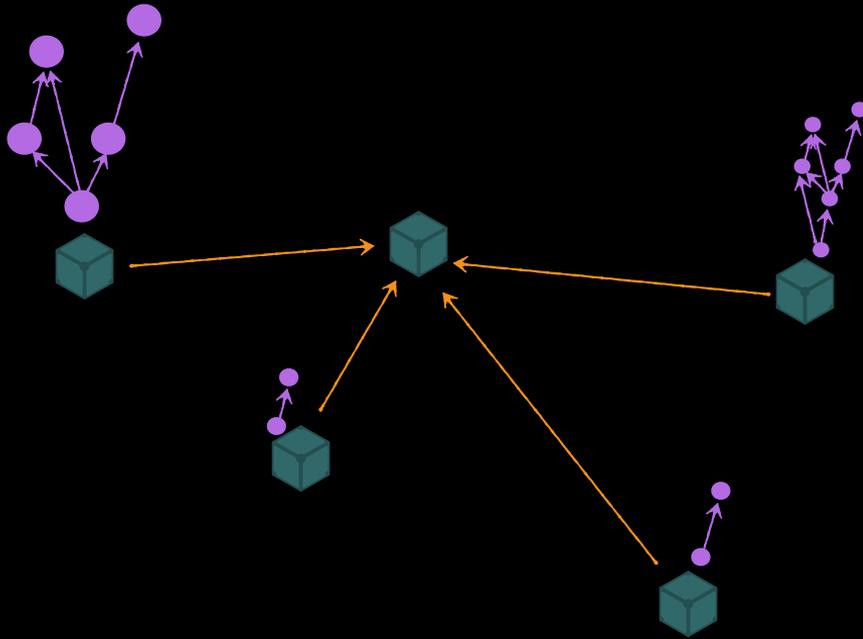

IPFS nodes form p2p networks
transport **agnostic** and with NAT traversal

libp2p a collection of peer-to-peer protocols

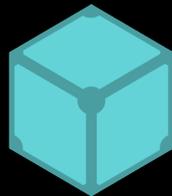

they find each other and content
with routing systems, like DHTs

and **exchange** dag nodes
like files in **http** or **bittorrent**

in go-ipfs:

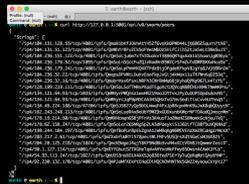

ipfs node

cli

library

http api

http/ipfs
gateway

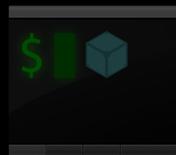

webui
